PTR Evidence Pack - Operator

Northstar Compute · northstar-compute.example

WHAT IS IN THE DATA FILE

COLUMN	MEANING
ip_address	The address the observation belongs to
observed_hostname	The name that address answered with
parent_domain	The registrable parent of that hostname
prefix	The block the address falls in
observed_at	When the observation was made

Delivered as .xlsx and .csv. This PDF is the summary that accompanies them.

CONCENTRATION IN THIS SAMPLE

PARENT DOMAIN	RECORDS	SHARE
northstar-cdn.example	2	33%
ns-edge.example	1	17%
customer-a.example	1	17%
customer-b.example	1	17%
northstar-compute.example	1	17%

SCOPE

Every reverse-DNS record we observed across Northstar Compute's address space.

> **Observations are partial.** Reverse DNS is evidence of naming, not of traffic, occupancy or legal ownership, and coverage of any operator's space is never complete.

ABOUT THIS SAMPLE

Northstar Compute is a fictional company invented for this demonstration. Every address shown belongs to a documentation range reserved by the IETF (192.0.2.0/24, 198.51.100.0/24, 203.0.113.0/24) and is not routable, so nothing here describes a real operator or a real network. A real deliverable carries the same structure with observed evidence and is watermarked to your account.
